

Hi,

With 18 years of experiences in a complex telecom industry, I have honed skills in embedded software development, product development processes, innovation management. I am well experienced in real time embedded system challenges like CPU, Memory and thread/process handlings. My experience in multiple methodologies (waterfall and agile) with scrum gives me a great understanding of internal challenges and solutions. My coding and script experience in C, python, Matlab and Simulink along with customer interaction and presentation skills makes me a strong candidate for your open position.

My educational record and trainings prove my continuous energy for learning and adopting new changes and challenges. My other skills as a great team player, positive attitude, cross function team and scrum experience fits me into modern way of working as well.

It would be great if you provide me an opportunity to meet so I can express my skills and experience in person.

Best Regards
